

- If you can name the target number, take the cards you used to name it. Also take the target-number card. Then replace all the cards you took by drawing from the top of the deck.
 - If you cannot name the target number, your turn is over. Turn over the top card of the deck and lay it down on the target-number pile. The number on this card is the new target number.
3. Play continues until all of the cards in the deck have been turned over. The player who has taken the most cards wins.

Mae and Joe take turns.

It is Mae's turn. The target number is 6.

Mae names the number with $12 - 4 - 2$.

She also could have said $4 + 2$ or $8 - 2$.

Mae takes the 12, 4, 2, and 6 cards. Then she replaces them by drawing cards from the deck.

Now it is Joe's turn.
