

Target Addition

Grade Level

TOOLS

Game board (below)

Markers

A game for
2-4 players

Why

To provide practice in mental arithmetic and strategic planning

How

- Choose a target number between 25 and 55.
- Take turns placing a marker on one of the numbers on the board, each time announcing the total of the covered numbers.
- For example, if the first player covered a 4, the second a 3 and the third a 2, the sum would be $4+3+2$ or 9. If the fourth player covered a 4, the total would be $9+4$ or 13.
- Each square may be used only once.
- The first player to reach the target number **exactly** wins. If a player goes over the target number he or she is out.

5	5	5	5	5
4	4	4	4	4
3	3	3	3	3
2	2	2	2	2
1	1	1	1	1
